

Event	State	Notes
Account not created due to user error	No Account	Start by testing with no account and user error to see if the system can prevent invalid sign-ups
Account successfully created	Logged Out Account	Testing that the account creates properly with valid user details
Unsuccessful log in	Logged Out Account	Validating that no unauthorised access is allowed
Password reset via 'Forgotten password' option	Logged Out Account	Most users would naturally reset their password after a failed login
Successful log in	Signed In Account	Testing that valid user details work and the transition to the signed in account works
Change account details	Signed In Account	Checking that internal updates work and the user stays signed in
Log out	Logged Out Account	Ensuring that the account transitions to logged out account
Successful log in	Signed In Account	Checks that the user can log back in after logging out and there are no errors-repeated event
Account successfully deleted	No Account	Verifies that the deletion event transitions correctly to the no account state. Note- assuming that the user data is removed from the database and not retained in a soft delete
